

MediaMaster™ Video On Demand System

MenuChannel

MM-1020

ROOM	SOURCE	MEDIA TITLE	TIME
1	VCR3	The Butterfly	08:00-11:00
2	VCR9	Weather Or Not Here It C	08:00-11:00
3	VCR2	Geometry I - The basics	08:00-03:00
3	EmVCR	How To Build An Airplan	09:00-11:00

Requirements

- MediaMaster Server (MM-1000 or MM-2000)
- Option 1: VGA monitor
- Option 2: VGA scan converter and channel modulator

Description

The MediaMaster system's MenuChannel feature is a software application that comes standard with all MediaMaster MM-1000 and MM-2000 VOD servers. MenuChannel runs continually on the server to show continually updated information about the status of video sources.

MenuChannel shows:

- Channel – The channel number of the video source
- Call # – The scheduled video title's call number
- Title – The video title's name
- Time – The time the title is scheduled for the teacher

MenuChannel is commonly used by librarians and media specialists as an aid in loading scheduled media titles into video sources when needed. If this is all that is needed and the server is sited near the video sources, the server can simply be equipped with a regular VGA monitor.

Alternately, the server can be configured to send the MenuChannel display out onto the school's broadcast video network. This requires an optional VGA scan converter and a video modulator. This lets anyone in the school see what video sources are being used at any time.

Features

- Comes standard with every MediaMaster server
- Helps library staff pick and load media into scheduled players in concert with Media Scheduler (MM-1155)
- Viewable on either a VGA monitor or on any designated channel of the school's broadband television network
- The day's scheduled titles are displayed to allow sharing and promote collaboration
- Continually updated scrolling display
- Displays status of all available media players
- Can be customized to meet a school's requirements
